

The One-Magneton Universe: Simulating Topological Magnetic Benevolence

Version 2.0 — Revised & Scientifically Deepened | June 2026

Classification: Tardigradia Game Engine | Physics Deep Dive Series | TGPU v2.0 **Particle Class:** Magnetic Monopole (hypothetical) | Magnetic charge: g_D | Mass: $> 1 \text{ TeV}$ | Topological soliton | Dirac quantization **Source:** Extends v1.0Magneton Deep Dive_ Benevolent Monopole.pdf (V1.0)

Δ Change Log V1.0 → V2.0

Parameter	V1.0	V2.0	Source
MoEDAL-MAPP search 2023	Parker bound and general search	V2.0: MoEDAL+MAPP@CERN Run 3 (2023-2025): No monopole detected. Cross-section limit: $\sigma < 0.5 \text{ fb}$ for $m_M > 100 \text{ GeV}$. MAPP adds new trajectory-based detection for slow monopoles. V2.0 simulation sets MFP $> 10^{26} \text{ m}$ (essentially stable)	MoEDAL-MAPP 2023 CERN
Dirac quantization update	$ge = \hbar/2$ stated	V2.0: Dirac charge quantization $g_D = \hbar/(2e) \times n = 68.5 \times e$ per Dirac unit ($n=1$). In simulation: monopole charge = $68.5 \times \text{electron charge}$ — far larger force coupling. WebGPU interaction table updated: $F_{\text{monopole}} = 68.5^2 \times F_{\text{electron}}$ at same distance	Dirac 1931; Preskill review updated

Parameter	V1.0	V2.0	Source
Condensed matter analogue monopoles	Spin ice Dirac strings	V2.0: Spin ice $\text{Ho}_2\text{Ti}_2\text{O}_7$ — magnetic monopole quasiparticles experimentally confirmed. Deconfinement temperature $T_D \sim 0.6$ K. V2.0 adds MAG-NETIC_MONOPOLE_QUASIPARTICLE mode for condensed matter simulation engine	Morris et al. Science 2009; 2024 review
Electroweak monopole	Dirac monopole only	V2.0: Electroweak monopole (‘Cho-Maison monopole’) mass $\sim 4\text{--}10$ TeV — lighter than GUT monopole ($\sim 10^{15}$ GeV). LHC accessible! V2.0: separate EW_MONOPOLE class with mass = 7 TeV (typical value), detectable at HL-LHC	Cho & Maison 1997; Ellis et al. PRD 2024

1. The One-Particle Universe Framework — V2.0 Update

The foundational architecture established in V1.0 — Worldline Monism, the “Origami Universe” metaphor, and the Object-Oriented ontology distinguishing intrinsic from extrinsic properties — is **fully preserved** and remains physically rigorous. V2.0 layers NEW discoveries from 2022-2026 atop this framework.

1.1 WebGPU Compute Architecture (V2.0 Core Infrastructure)

V1.0 designed for WebGL/Three.js on the CPU-side particle update loop. V2.0 upgrades to WebGPU (available in Chrome 113+ May 2023, Firefox 2024):

```
// WGSL Compute Shader - V2.0 Particle Integration
@binding(0) @group(0) var<storage, read_write> particles: array<ParticleState>;

struct ParticleState {
    position: vec4f,
    momentum: vec4f,
    spin: vec2f,           // Spinor components
    berry_phase: f32,      // Geometric phase accumulated
    proper_time: f32,      // tau - worldline parameter
    color_charge: u32,      // Packed color in 2 bits (R=0,G=1,B=2)
    quantum_numbers: u32,  // Packed: isospin, strangeness, charm, beauty
    decay_lifetime: f32,
    entanglement_id: i32,  // -1 = unentangled; >=0 = entanglement group
```

```

}

@compute @workgroup_size(64)
fn updateParticles(@builtin(global_invocation_id) id: vec3u) {
    let i = id.x;
    if (i >= arrayLength(&particles)) { return; }

    var p = particles[i];

    // Feynman-Schwinger proper time evolution
    let dtau = uniforms.dt / p.mass; // proper time step

    // Update worldline parameter
    p.proper_time += dtau;

    // Berry phase accumulation (topological phase)
    p.berry_phase += dot(uniforms.gauge_field, p.momentum.xyz) * dtau;

    // Lorentz force (for charged particles)
    let F = cross(uniforms.B_field, p.momentum.xyz) * p.charge_sign;
    p.momentum.xyz += F * uniforms.dt;
    p.position.xyz += p.momentum.xyz * uniforms.dt / p.energy;

    particles[i] = p;
}

```

1.2 Updated Physical Constants (CODATA 2022)

Constant	V1.0 Value	V2.0 Value (CODATA 2022)
m _e	9.10938356×10 ⁻³¹ kg	9.1093837139×10 ⁻³¹ kg
e	1.60217663×10 ⁻¹⁹ C	1.602176634×10 ⁻¹⁹ C (exact)
hbar	1.054571817×10 ⁻³⁴ J·s	1.054571817×10 ⁻³⁴ J·s (exact)
c	2.99792458×10 ⁸ m/s	2.99792458×10 ⁸ m/s (exact)
alpha	1/137.036	1/137.035999084 ±0.000000021

2. V2.0 Enhanced Data Structures

Extending V1.0 struct definitions with 2022-2026 discoveries:

```

// V2.0 Universal Particle State – extends V1.0
struct ParticleInstanceV2 {
    // Inherited from V1.0
    double proper_time;           // tau worldline parameter (meter)
    glm::dvec3 position;          // 3-space vector
    glm::dvec3 momentum;          // 3-momentum (relativistic)
    float spin_z;                 // +0.5 or -0.5 (or eigenvalue)
    float berry_phase;            // Accumulated Berry/Aharonov-Bohm phase

    // V2.0 ADDITIONS
    float entanglement_r;         // Reduced density matrix purity 0-1
}

```

```

int entanglement_partner_id; // -1 = none; global particle ID
float flavor_oscillation_phase; // For neutrinos/kaons
uint32_t color_bits; // 3-bit: R(b0),G(b1),B(b2)
float decay_probability_dt; // P(decay in dt) for unstable particles
float vacuum_alignment; // Order parameter for condensate mode

// WebGPU Buffer packing
// Total: ~100 bytes/particle * 10^6 particles = 100 MB GPU memory
float _pad[2]; // Align to 16 bytes for WGSL
};

```

8. V2.0 Benevolence Metric Update

The “Benevolence” concept central to all OEU documents is given a precise V2.0 mathematical definition grounded in 2022-2026 quantum information theory:

Benevolence = Quantum Coherence + Information Preservation + Symmetry Maintenance

$$B(t) = C(t) \cdot F(t) \cdot S(t)$$

Where: - $C(t)$ = l_1 -norm coherence of particle density matrix (Baumgratz et al. 2014) - $F(t)$ = quantum Fisher information / classical Fisher information (ratio ≥ 1) - $S(t)$ = fraction of symmetries unbroken at time t

V2.0 game mechanic: Benevolence score increases when: - Particles maintain long entanglement coherence (high C) - Topological protections are active (Berry phase winding conserved) - Symmetry groups are preserved in interactions (no spurious symmetry breaking)

End of v1.0 Magnetron Deep Dive_ Benevolent Monopole V2.0 | Tardigradia Game Engine SubParticles Series This document supersedes V1.0 in all physics specifications.
